PROFILE SUMMARY

I'm a Computer Science undergraduate who genuinely enjoys building things from distributed systems to AI-powered tools to full-stack platforms. What draws me to any project isn't the tech stack or the title on the role; it's the problem itself, and I'll dig in and learn whatever it takes to solve it. I've picked up skills across backend systems, frontend development, databases, and AI/ML simply because each project demanded something new, and I wanted to meet it. That curiosity has carried me through hackathons, internships, and late nights debugging things nobody asked me to fix. I care about doing the work properly, not just quickly — writing code I'd be comfortable handing to a teammate and showing up consistently, not just when it's convenient. I'm early in my career, but I bring real effort, real curiosity, and a willingness to be useful wherever I'm needed.

EDUCATION

SARANATHAN COLLEGE OF ENGINEERING

Bachelor of Engineering in Computer Science, GPA: 8.024 (6th semester)

Expected May 2027

CAMPION ANGLO INDIAN HIGHER SECONDARY SCHOOL

Class XII, Percentage: 83.5%

Jun 2022 - May 2023

SKILLS

Languages: Java, JavaScript, TypeScript, Python

Frontend: React.js, Three.js, HTML5, CSS3

Backend: Node.js, REST APIs, BullMQ, WebSockets

Databases: PostgreSQL, MongoDB, MySQL, Redis

DevOps: Docker, Docker Compose, GitHub Actions, CI/CD, Git

AI/ML: OpenAI APIs, Gemini, CLIP, RAG pipelines, Vector Search

Concepts: DSA, OOP, System Design

Design: Figma, Blender

PROJECTS

AI-Powered Code Review Bot | [GitHub](#)

- Built a multi-tenant SaaS platform that reviews GitHub PRs using AI and posts inline comments, with a React dashboard for monitoring reviews and subscription metrics
- Stack: Node.js, TypeScript, PostgreSQL, Redis, BullMQ, OpenAI — with GitHub App integration, Slack notifications, and role-based org management. Supports multi-tenant orgs with role-based access across N+ teams.

Scalable CSV Processing & Job Queue System | [GitHub](#)

- Distributed CSV processing system using BullMQ + Redis with streaming parsing (`fs.createReadStream`) for memory-efficient handling of arbitrarily large files
- Features real-time job progress tracking (0–100%) via a live React dashboard, automated file cleanup, and email notifications on completion. Real-time progress tracking with sub-second polling latency.

Smart Mall Navigation System (Intel Hackathon) | [GitHub](#)

- Full-stack AI mall concierge (React + Django) with a RAG pipeline using Gemini embeddings + MongoDB Atlas Vector Search for natural language store/product queries. Built during a 24-hour hackathon, ranked among the top teams.
- Multimodal visual fashion search via CLIP ViT-B/32 + cosine similarity, plus an interactive 3D mall map built with Three.js + React Three Fiber on a Blender-modeled environment.

ACHIEVEMENTS & CERTIFICATIONS

- Best Performer Award - Smart Innovators Hackathon, JJ College of Engineering and Technology, in association with T-Hub.

- Secured 3rd Place in DEVSPARK'25 - DevForge (24-hour Hackathon), KPR Institute of Engineering and Technology.
- GenAI-Powered Data Analytics Job Simulation - TATA - Forage (2025).
- Java Programming Masterclass - Udemy.
- Claude 101 Certificate - Anthropic (2026) [Certificate](#)
