PROFILE SUMMARY

Computer Science undergraduate who enjoys building things — from distributed systems to AI-powered tools to full-stack platforms. Skilled across backend systems, frontend development, databases, and AI/ML, developed through internships, hackathons, and independent projects. I care about doing the work properly: writing code I'd be comfortable handing to a teammate, and showing up consistently.

EDUCATION

SARANATHAN COLLEGE OF ENGINEERING

Bachelor of Engineering in Computer Science, GPA: 8.024 (6th semester)

Expected May 2027

CAMPION ANGLO INDIAN HIGHER SECONDARY SCHOOL

Class XII, Percentage: 83.5%

Jun 2022 - May 2023

INTERNSHIP EXPERIENCE

Backend Developer Intern — AI-CareerOS | XTRAGRAD Technologies Pvt. Ltd.

Jul 2026

- Owned backend development for AI-CareerOS, a unified AI-powered career platform integrating learning, skill development, project building, interview preparation, and recruitment, as part of a cross-functional team.
- Integrated backend APIs with the frontend and AI/ML teams, aligning request/response contracts and resolving cross-team data-format and timing issues to achieve reliable end-to-end integration.
- Improved error handling and response consistency across API endpoints following full-system testing, and documented endpoints to streamline cross-team collaboration.
- Independently designed and built a RAG (Retrieval-Augmented Generation) chatbot as a self-directed minor project to strengthen skills directly applicable to the major project — FastAPI backend, ChromaDB vector store, local sentence-transformer embeddings, and NVIDIA NIM (Llama 3) for grounded, source-cited answers over real documents.

Certificate: XG-INT-762167 (verifiable at xtragrad.in/verify)

Software Engineer Intern — GenoSpark

May 2026 – Sept 2026

- Optimized Next.js metadata, canonical URL slugs, and JSON-LD structured schemas (FAQ & Question/Answer), improving search visibility and social preview rendering.
- Debugged and refactored the bulk question upload, validation, and activation pipelines, resolving CSV misrouting and deduplication issues across certification sets.
- Hardened the offer/relieving letter document generation pipeline (OpenXML/Docx), fixing digital signature injection and cross-user file leakage vulnerabilities; modularized appointment management into reusable React hooks and maintained a 100% pass rate across 474 unit/integration tests.

SKILLS

Languages/Frontend/Backend: Java, JavaScript, TypeScript, Python, React.js, Next.js, React Native, Node.js, Express, REST APIs, BullMQ, WebSockets

Databases/DevOps/AI-ML: PostgreSQL, MongoDB, MySQL, Redis, Docker, GitHub Actions, CI/CD, Terraform, OpenAI APIs, Gemini, CLIP, RAG pipelines, Vector Search

PROJECTS

Enterprise-Grade AI Code Review Bot | [GitHub](#)

- Engineered a multi-tenant GitHub App acting as an automated Senior Engineer by analyzing PRs via OpenAI to post inline comments on bugs, security flaws, and performance issues.
- Built 100% Infrastructure-as-Code (Terraform) on AWS ECS Fargate within a private VPC (Express.js, Redis, BullMQ); added PostgreSQL/Prisma usage tracking and billing analytics with sub-second webhook processing.

Scalable CSV Processing & Job Queue System | [GitHub](#)

- Distributed CSV processing system using BullMQ + Redis with streaming parsing (fs.createReadStream) for memory-efficient handling of arbitrarily large files
- Features real-time job progress tracking (0–100%) via a live React dashboard, automated file cleanup, and email notifications on completion. Real-time progress tracking with sub-second polling latency.

ACHIEVEMENTS & CERTIFICATIONS

- Best Performer Award – Smart Innovators Hackathon, JJ College of Engineering & Technology (with T-Hub).
- 3rd Place, DEVSPARK'25 – DevForge (24-hour Hackathon), KPR Institute of Engineering and Technology.
- GenAI Data Analytics – TATA/Forage (2025) | Java Masterclass – Udemy | [Claude 101 – Anthropic](#)
